Abstract (en)
[origin: WO2013165295A1] Anchor (18) for tensioning at least one component for a civil engineering construction (14), which anchor (18) is arranged to at least partly be located in the ground/underlying surface (12). The anchor (18) comprises at least one surface (20, 22, 24) that is intended to at least partly be covered with material (25), so that only the weight of said material (25) which acts on said at least one surface (20, 22, 24) gives said anchor (18) the capacity for tensioning said at least one component for a civil engineering construction (14).
