Abstract (en)
[origin: CN104417035A] The present invention provides a device for printing on containers, and the device is provided with a drivable rotor having a plurality of rotating container receptacles, at least one printhead for applying a printed image on the container, at least one curing station in the periphery of the rotor and at least one protective device, wherein at least one container receptacle and the protection device are designed such that by relatively moving the container receptacle and at least a portion of the protection device in the area of curing station, a housing for at least one of the container receptacle built-in reservoir is formed.
