Abstract (en)

[origin: WO2013170028A1] A reconstituted tobacco product is disclosed that can be used to produce smoking articles having lower carbon monoxide levels and carbon monoxide to tar ratios. The reconstituted tobacco material contains a polymer component and a burn retardant. The polymer component forms a coating on the surface of the reconstituted tobacco sheet. The burn retardant can be incorporated into the tobacco material or combined with the polymer component and contained in the coating.
