Abstract (en)
[origin: WO2013168110A1] A ski boot (1) comprising a rigid shell (2) made of plastic or composite material, which is shaped so as to accommodate the foot of the user, and at least a first (3) and a second (3') removable front sole which, alternatively to each other, are adapted to be fixed in a rigid and stable although easily removable manner to the lower wall (2a) of the shell (2) substantially at the tarsal-phalangeal area of the foot; the shell (2) being provided with a first transversal stiffening plate (12) made of metal material which is embedded within the lower wall (2a) of the shell, close to the tip of the shell (2), and is structured/shaped so as to partially emerge/crop out on the outer surface of the lower wall (2a) of the shell substantially at the metatarsal- phalangeal area of the foot; the first (3) and second (3') removable front soles comprising: an upper plate- shaped socle (13, 33) which has the upper face (13a, 33a) shaped so as to be removably coupled to the lower wall (2a) of the shell (2) substantially at the tarsal- phalangeal area of the foot, and a second transversal stiffening plate (16, 36) made of metal material which, in turn, is embedded within the upper plate-shaped socle (13, 33) close to the front end of the socle (13, 33), so as to be aligned below the transversal stiffening plate (12) of the shell (2), and is further shaped so as to emerge/crop out on the surface of the upper face (13a, 33a) of the socle (13, 33a) substantially at the metatarsal-phalangeal area of the foot, so as to rest directly on the transversal stiffening plate (12) of the shell (2).
