Abstract (en)
[origin: WO2013168152A1] A shower partition assembly that includes at least one and preferably at least two innovative hinge mechanisms, a stationary wall and a door pivotally attached thereto by the hinge mechanisms, wherein in the closed state, the door panel is flush with the stationary wall. The substantially parallel gap formed between the stationary wall and the pivoting door is sealed by a sealer, wherein the pivoting door may pivot in both directions, with respect to the stationary wall. When the door is opened in the a direction (37) towards a first-open-state, the open-end arm pivots about the shaft and the bridge moves towards the wall-vertical edge, until the wall-vertical edge and the sealer mounted thereon, are accommodated inside arm-section gap of a U-shaped of a U-shaped arm-section.
