Abstract (en)
[origin: WO2013167497A2] The invention relates to a disintegrating machine, in particular a rotor cutter or rotor tearing device, comprising at least a first blade shaft (21), a second blade shaft (22), a frame (23), and a driving device (1) for driving the blade shafts, wherein the blade shafts (21, 22) are rotatably accommodated by means of bearings (25) in bearing receptacles of the frame (1), which bearing receptacles are designed to improve the maintenance friendliness, in particular by means of a maintenance-friendly bearing receptacle and/or quick-exchange coupling and/or quickly removable scrapers and/or multifunctional bearing plates and/or by means of reinforcing ribs, and with regard to a lighter construction while achieving the same or better stability properties.
