Abstract (en)  
[origin: WO2013167627A1] The present invention relates to a substance(s) deposition control device for an offset printing system comprising at least one offset plate (2) intended to receive at least one substance so as to transfer the substance or substances onto a substrate (4), at least one means for the controlled deposition of at least one substance, the deposition means comprising at least one head unit spraying at least one wetting solution and at least one head unit spraying at least one coloured substance, at least one means (6) for cleaning the offset plate (2). The covering of the offset plate (2) comprises a mesh structure defined by a plurality of hydrophilic and lipophilic individual surfaces capable of receiving a controlled deposition of substance(s), each of these hydrophilic and lipophilic individual surfaces being separated from its direct neighbours by at least one hydrophobic and lipophobic peripheral surface. The invention also relates to a printing system incorporating the device and to a printing process implementing the device.
