Abstract (en)

[origin: WO2013167269A1] The invention relates to a method for producing blanks (33), in particular for packages (10) for cigarettes, wherein a material web (32) for producing individual blanks (33) is provided with a print (31, 49) at intervals, and wherein the material web (32) is provided with an embossing (30) at intervals by means of an embossing unit (34) and wherein individual blanks (33) are separated from the material web (32) by means of a cutting unit (45), in such a way that preferably each blank (33) comprises a print (31, 49) and an embossing (30) at a predetermined position. The invention is characterized in that together with the embossings (30) a marking (37) is placed in each case on the material web (32), and in that the relative position of the prints (31, 49) and the embossings (30) to each other is determined by comparing the relative position of the prints (31, 49) and the markings (37) with each other, wherein the relative positions of the prints (31, 49) and embossings (30) are aligned to each other, if necessary, in particular by changing the conveying speed of the material web (32) correspondingly.
