Abstract (en)

[origin: WO2013167116A1] The present invention relates to a connection and also a plug-in system (18) for the simple, secure and reproducible coupling of two components (1, 2) incorporating a flat dowel (3). For this purpose a flat dowel (3) is screwed into a first component (1) in positive engagement and a second component (2) has a sliding groove (9) which is pushed over the flat dowel (3) until the two components (1, 2) reach an end position with respect to one another. A connection is produced with optimal strength, by forming a latching strip (10) on the flat dowel (3), and a latching groove (12) is formed in the sliding groove (9), so that the two components (1, 2) are latched together.
