Abstract (en)
[origin: WO2014019700A1] The invention relates to a device for presenting information carriers, such as posters, pictures, advertisements, and the like, having at least one transparent carrier plate, onto which an information carrier, preferably in the form of foil, film, or sheets can be mounted, a frame (2) surrounding the carrier plate, and an illumination device attached to the frame (2) for illuminating and/or backlighting the information carrier. The frame (2) comprises a lateral frame opening (20), by way of which the carrier plate to which the information carrier is attached can be pulled out/inserted into the frame (2) in a direction that is parallel to the frame plane defined by the frame. According to the invention, the device is characterized in that the frame opening (20) can be locked by way of a removable frame part, which can be detachably connected to the remaining frame part (2b, 2c, 2d) such that the frame (2) encompasses the information carrier (20) on all sides when the frame opening (20) is locked.
