Abstract (en)

[origin: WO2013168994A1] A method of transmitting contents and user's interactions among multiple devices is provided. The method includes: determining a group including some of the plurality of object devices; transmitting the data to the object devices of the group; receiving confirmation information from the object device which completes receiving of the data, among the object devices of the group; determining a clone device based on the confirmation information; and transmitting clone information to the clone device. The clone information is used to transmit the data from the clone device to one or more object devices which are not comprised in the group among the plurality of object devices.
