Abstract (en)
A beverage dispensing device for dispensing beverages is provided. The beverage dispensing device comprises a receptacle for a beverage container made from deformable material, said receptacle being defined by means for deforming the beverage container in order to expel liquid stored therein; a hose or pipe system connecting the beverage container and an outlet, wherein a valve is placed along said system for opening and closing of the connection between the beverage container and the outlet. The beverage dispensing device further comprises means for measuring the pressure of the liquid in the beverage container or in the hose or pipe system, the measured pressure being used for controlling the means for deforming the beverage container such that a desired pressure in the beverage container is attained.
