Abstract (en)

[origin: WO2013170286A1] Drinking device (1) with a closure cap (4) having a drinking opening (6) and intended for closing a drinking container (2) which has a receiving chamber (3) for liquid, and with a conveying means (7) for conveying liquid from the receiving chamber (3), wherein the conveying means (7) has an inner wall element (8) which is received in an outer wall element (9) so as to form a gap, wherein the gap defines between the wall elements (8, 9) a conveying duct (11) which is connected via an inlet opening (12) to the receiving chamber (3), wherein the conveying duct (11) is connected, in a region adjoining the closure cap (4), to an annular distribution duct (13) which is connected to the drinking opening (6).
