Abstract (en)
[origin: WO2013174497A1] The invention relates to a bio-measurement data recording device having a seat (12) for a person, which has a back surface (26) made of a foam material, a seat surface (28), a plurality of back surface sensors (32), which are embedded in the back surface (26) such that a plurality of leads for an electrocardiogram of the person can be received, and at least two seat surface sensors (32), which are embedded in the seat surface (28) such that leads for the electrocardiogram of the person can be received, a left hand grip (14) which is arranged such that it can be gripped by the person with the left hand and which has a left hand grip sensor (38) for conducting a channel for the electrocardiogram, a right hand grip (16), which is arranged such that it can be gripped by said person with the right hand and which has a right hand grip sensor (42) for conducting a channel for the electrocardiogram, and an evaluation unit (54) which is connected to the sensors and is configured to ascertain the electrocardiogram.
