Abstract (en)
[origin: WO2013173408A1] A system and method for authenticating an individual item of a manufactured product with a mobile computing device includes generating a first identifier including an at least partially random visual feature on the item during manufacture of the item, and generating a second identifier associated with the item, where the second identifier is cryptographically related to the first identifier. One or more digital images of the first and second identifiers may be created by a camera of the mobile computing device. The digital images may be used to validate the authenticity of the item at the mobile computing device.
