Abstract (en)

The present application relates to a device (1) for active movement of a person or object comprising a base structure (2) and a platform (3) movably supported on the base structure (2) by means of a support (4). The support (4) is arranged between said base structure (2) and said platform (3) and is configured to allow a movement of said platform (3) in at least three degrees of freedom. At least three cables (6.1, 6.2, 6.3) are fastened to an underside of said platform (3) at a first end. The at least three cables (6.1, 6.2, 6.3) are fastened at a second end to a common initial point (8), said initial point (8) being freely movable at least in one plane by actuation means.
