Abstract (en)
Mounting assembly for mounting a rail to a concrete foundation of a railbed, wherein the mounting assembly comprises a mounting part on which the rail sits, and at least two plugs to be accommodated in the concrete foundation, wherein the plugs are provided with an internal channel for accommodating a screw which is screwed into the plug from above through a mounting opening in the mounting part, wherein the plug has a first coupling member and the mounting part has a second coupling member for cooperation with the first coupling member, wherein the cooperating coupling members constitute a form lock that blocks rotation of the plug relative to the mounting part about the centre line of the internal channel.
