Abstract (en)
[origin: EP2851472A1] The invention relates to a positioning framework for arranging in an underwater bottom foundation piles arranged in a geometric pattern. The positioning framework comprises mutually connected guide tubes arranged in the geometric pattern for the foundation piles, floating means which impart buoyancy to the positioning framework, and control means which can adjust the buoyancy of the positioning framework. The invention also relates to a method for arranging the foundation piles in an underwater bottom, and an assembly of a floating platform and a positioning framework optionally coupled thereto.
