Abstract (en)

[origin: WO2013174689A1] The invention relates to a method for producing solid alkali metal organosiliconates having a molar ratio of alkali metal to silicon of 0.1 to 3 from aqueous solutions thereof having an alcohol content of a maximum of 5% by weight and a halide anion content of a maximum of 1% by weight, wherein the removal of water from the aqueous solutions proceeds in the presence of an inert liquid F.
