Abstract (en)
[origin: WO2013173889A2] Utility model in the field of construction products and refers to the construction of a composite insulation panel. The composite panel consists of a single layer of polyurethane foam (1) with a thickness of more than 20 mm. The second layer is a fiberglass cloth (2) with a thickness of not more than 2 mm. The two layers are glued to one another. On the periphery of the panel a glab (6 and 7) to the two neighboring sides and a tooth respectively (5 and 8) to the opposite of these sides are made to eliminate any thermal bridge during installation. In this case the fiberglass cloth (2) extends beyond the dimensions of the polyurethane foam (1) with not more than 40 mm. in the two neighboring sides.
