Abstract (en)  
[origin: WO2014005836A1] In order to provide a device (1) for generating a drive movement comprising a consumer (3), a fuel tank (2), which is connected to the consumer (3) through a fuel line (6), and a pneumatically operable emergency shut-off valve (7) arranged in the fuel line (6), wherein said emergency shut-off valve shuts off the fuel line (6) in a closed position and opens it in a through position, wherein said device provides a greater level of safety, the invention proposes that the emergency shut-off valve (7) remains in its closed position, or even automatically shifts to this position, in the event of defective operation.
