Abstract (en)

An apparatus for processing the flesh side of a mink pelt comprising: - a mandrel (2) for mounting a pelt (8), the fur side of the pelt facing inwards towards the surface of the mandrel and the flesh side of the pelt facing outwards; - at least one first scraping roller pair (3), the scraping rollers (3a, 3b) of the first scraping roller pair (3) being arranged on opposing sides of the mandrel and each roller being operated to be rotatable about its rotation axis, and during operation of the apparatus to be engageable with the flesh side of the pelt, each scraping roller having a roller surface (11) with a plurality of teeth (12), being arranged mutually spaced along the circumference of the roller surface - a drive for providing a linear movement of the mandrel (2) in relation to the scraping rollers in a direction of forward movement (M); - the teeth on a first scraping roller (3a) of the first scraping roller pair (3) extending essentially helically along the roller surface and the teeth (12) on the second scraping roller (3b) of the first scraping roller pair (3) following an essentially V-shaped path between the end faces (10) of the scraping roller.
