Abstract (en)

[origin: WO2013178897A1] System for spraying a product inside a cabin containing at least one piece of equipment, said system being intended to be arranged in the cabin and comprising a liquid reservoir (1) able to contain said product, at least one spray nozzle (7) connected to the reservoir by a duct (6) able to convey the product from the reservoir to the nozzle, the liquid containing the product being moved along the duct by a pump (2), said system being characterized in that the pump is immersed in the reservoir and in that the duct is telescopic and mounted on the outlet side (S) of the pump, and in that the duct is able to be deployed between a first position in which the pump is inactive and a second position in which the telescopic duct is fully deployed to diffuse the product inside the cabin under the effect of the pressure generated by the pump; the telescopic duct returning naturally to its first position under the effect of gravity in the absence of pressure.
