Abstract (en)
[origin: WO2013178511A1] The present invention relates to a medicament container retaining mechanism (34) for a medicament delivery device (10) comprising at least one flexible retaining member (36) arranged to a first housing part (12) of said medicament delivery device (10), which first housing part (12) is configured to receive a generally tubular medicament container (24) therein; and wherein said at least one flexible retaining member (36) is configured to interact with a rim(44) of said medicament container (22) received therein, whereby said at least one flexible retaining member (36) is configured to exert mainly longitudinally directed clamping forces to said rim (44) of said medicament container (22) to prevent movement in the generally longitudinal direction of said medicament container in said housing part (12).
