Abstract (en)  
[origin: WO2013178675A1] The invention relates to a device for printing printed sheets by means of one or more inkjet print heads (5) in a printing unit (1) on a sheet-guiding impression cylinder (2) in a sheet-fed printing press having several printing units. According to the invention, a pivoting mechanism in the region between the surface of the impression cylinder (2) and a parking position is associated with the or each inkjet print head (5) within a printing unit (1). The pivoting mechanism is designed as a parallel guide, wherein the inkjet print head (5) is moved by the surface of the impression cylinder (2) at a distance from a coating unit in the printing unit (1).
