Abstract (en)

[origin: WO2013178665A1] The invention relates to a bottle (1) including a container (2) comprising a bottleneck (3) defining an opening (35); a cap (4) comprising an opening (41) and including: a first wall (48) surrounding the bottleneck (3); a second wall (42) forming a seal at the top of the cap; a third wall (44) extending axially from the second wall; the cap being mounted so as to be axially movable relative to the bottleneck (35), between a sealing position and a flow position at the opening (3), a sealing position in which the bottleneck is in contact with the third wall (44), and a flow position in which a passage is provided between the bottleneck and the third wall (44); a washer (32) providing the seal between the bottleneck and the cap in the stroke between the sealing position and the flow position, the through-opening (41) being provided between the washer and the third wall (44).
