Abstract (en)

[origin: WO2013182459A1] In order to safely and reliably output a plurality of solid portions (Fk), a dispensing device (1) that is easy to produce and simple to use and then dispose of is proposed. The dispensing device (1) according to the invention is designed for solid portions (Fk) present in bulk and has an axis of rotation (2). The dispensing device (1) is also equipped with the following components: (a) a positioning device (3), and (b) a retaining device (4) having at least two retaining means (5) arranged coaxial to the axis of rotation (2) for accommodating one solid portion (Fk) each. The positioning device (3) and the at least two retaining means (5) can be moved relative to one another on paths coaxial to the axis of rotation (2), such that the positioning device (3) can be oriented in alignment with the retaining means (5) individually during the movement and at least one of the at least two retaining means (5) can be filled with one solid portion (Fk) each by means of the positioning device (3). Furthermore, the at least two retaining means (5) can be emptied by rotating the retaining device (4) in order to output the solid portions (Fk).
