Abstract (en)

[origin: WO2013178959A1] The invention relates to a device for electrochemical treatment, locally in particular, of a conductor substrate by movement across said substrate, which can be used in every position, including a head, a shaft, an electrolyte inlet and outlet each including a flexible pipe, and two peristaltic pumps mounted on the electrolyte inlet and outlet, the head of said device being removable from said shaft, the pumps being connected to a brushless motor and the device also comprising a flowmeter for adjusting and controlling the flow in the inlet portion of said head.
