Abstract (en)
[origin: WO2013179148A1] The invention relates to a Venetian blind comprising: a plurality of slats (10), each of which comprises a profiled element which extends in a direction of longitudinal extension X with two opposite longitudinal edges (11,12) and defines the slat body; a plurality of support half-ladders (20) which connect said overlapping slats to each other. Each slat comprises a plurality of coupling portions (16, 26), which are positioned next to or at each longitudinal edge and attach the half-ladders to the profiled element. Each coupling portion consists of a tongue which is cut into the profiled element and is moveable between a raised position and a lowered position. The blind comprises a plurality of stabiliser elements (30), each of which blocks one of the tongues in the lowered position.
