Abstract (en)

[origin: WO2013181310A2] Methods and systems for a controlling device features based on vehicle state and device location are provided. Specifically, the device may be any type of electrical device capable of transmitting and/or receiving a signal (such as a phone, tablet, computer, music player, and/or other entertainment device). In some instances, the device may be associated with one or more vehicles. Although the device may be configured to run one or more applications, the functionality of the one or more applications may be controlled by a system associated with the vehicle. In some cases, this control may depend on the device application type, device location (either inside or outside of a vehicle), law, operator state, and/or vehicle state.
