Abstract (en)

[origin: WO2013175319A2] The invention relates to a device (1) and a method for writing a plurality of transponders (201, 202, 203), comprising a region (110) for positioning a packaging container (300) having the plurality of transponders (201, 202, 203), comprising a write-read circuit (120), comprising an antenna device (130), comprising a shield (140), wherein the antenna device (130) is connected to the write-read circuit (120) in order to write the plurality of transponders (201, 202, 203), wherein the antenna device (130) can be moved at least partially around the region (110) for positioning in a movement region (131), wherein the region (110) for positioning and the movement region (131) are arranged within the shield (140), wherein the shield (140) is designed to shield electromagnetic waves (W) from the antenna device (130) during the writing of the plurality of transponders (201, 202, 203) in order to prevent the writing of additional transponders (901, 902, 903) outside of the shield (140).
