Abstract (en)

[origin: WO2013178388A1] The invention relates to a device and a method for operating an electromechanical adjustment device (2) having an electric drive device (4), wherein a control unit (3) detects the reaching of a mechanical end stop of the adjustment device (2) and controls and/or regulates the electric drive device (4). According to the invention, after a mechanical end stop of the adjustment device (2) is reached, a change in the direction of rotation is automatically actuated in the electric drive device (4) for a predefinable period of time or a predefinable traveling distance.
