Abstract (en)
[origin: WO2013175141A1] The management of the location of a user of at least one apparatus, the apparatus comprising a device for geolocation of the latter being able to transmit geolocation data to a plurality of receivers, comprises: - the parameterization of a filter for defining at least one spatio-temporal criterion of accessibility of the geolocation data by at least one of the receivers, the parameterization being done by a user interface allowing the user to parameterize by himself a database associating the receivers and the associated spatio-temporal criteria; - the activation, or the deactivation, by the filter of the transmission of the geolocation data to each receiver as a function of the spatio-temporal criterion (or criteria) associated therewith. The user having a plurality of apparatuses the parameterization is carried out for several apparatuses.
