Abstract (en)
[origin: EP2856910A1] Sectional shelving (1) with modular shelf elements, comprising at least two pairs of vertical uprights (2, 3) in longitudinally and transversely staggered positions, at least one pair of horizontal crossbars (4, 5), each adapted to connect a respective pair of uprights (2, 3) together in the transverse direction, and at least one pair of horizontal shelves (13, 14) located at different heights to define vertically staggered support surfaces. Each shelf (13, 14) consists of at least one modular element (15) having a flat top portion (17) and downwardly folded longitudinal lateral portions (19) substantially perpendicular to said flat top portion (17); each crossbar (4, 5) has a substantially vertical wall (9, 10) with an upper edge (11, 12) having a stiffening member (23, 24). The stiffening member (23, 24) is substantially vertical and defines a joining element (25, 26) for the shelves (13, 14) and the joining element (25, 26) extends seamlessly and with no apertures therein; each modular element (15) has transverse end appendages (27) each designed to simply lay on said joining element (25, 26) of a respective crossbar (4, 5).
