Abstract (en)
An adjustable personal stimulator includes a main handle portion (10), a middle portion (20) connected to the main handle portion (10), a movable handle portion (30), a cylinder-shaped member (50) connected to the movable handle portion (30), and a tip (60) connected to the middle portion (20). The main handle portion (10) is movable relative to the movable handle portion (30). The stimulator further includes a G spot stimulator (52) disposed on said cylinder-shaped member (50), such that the G spot stimulator (52) is movable relative to the tip (60). The handles can be moved in the same direction or once inserted, may be moved in opposing directions at the same time.
