Abstract (en)

A recording apparatus includes: an adhesive belt (2) that supports and transports a recording medium (P) on a support surface (S1); a sensor (10) that detects whether or not an angle (##) formed between the support surface (S1) and the recording medium (P) separated from the support surface (S1) is in a range of 80° or more and 100° or less in a separation position of the recording medium (P) from the support surface (S1); a winding section (8) on which the recording medium (P) is wound; and a control section that controls the winding section (12) to be driven when the sensor detects that the angle (##) is in the range in the separation position.
