Abstract (en)

[origin: WO2015051938A1] The invention relates to a lighting arrangement (1) for information panels, comprising a plurality of light sources and a light pane (4) through which light of the light sources is emitted, wherein a plurality of lighting modules (6) and a retaining module (5) which extends flatly and is oriented substantially parallel to the light pane (4) are provided. Each of the lighting modules (6) has at least one light-emitting diode as a light source and an optical element for shaping and deflecting light of the light-emitting diode in the direction of the light pane (4), and the lighting modules (6) with the respective at least one light-emitting diode and the optical element can be secured to the retaining module (5) in a spaced manner such that for each lighting module (6), a substantially quadrangular sub-region of the light pane (4) is illuminated, and a light pane (4) region which is provided for displaying information is completely illuminated in a substantially homogenous manner by all of the lighting modules (6).
