Abstract (en)

[origin: WO2013186190A1] A helmet (10) provided with a half-chinbar comprises a protective shell (12) that has at least a front aperture (14) and a half-chinbar (13) that extends cantilevered from one side (17) of the front aperture (14) so as to have a free end (20) disposed in an intermediate position in said front aperture (14). The shell (12) and the half-chinbar (13) are two distinct components which are constrained in substantial correspondence of said side (17) of said front aperture (14) by means of a join region (18) configured as a hinge.
