Abstract (en)

[origin: WO2013186157A1] The invention relates to an active dynamic stool (1) comprising the following: a seat part (2), a three-dimensional articulation system (100) made up of at least three legs (3) with foot parts (4) at the lower end thereof, wherein the legs each have their upper end mounted on the seat part (2) for movement on seat-part-mounted connecting articulations (5), such that the seat part (2) can execute oscillating and circular movements in respect of its non-deflected rest position.
