Abstract (en)

[origin: WO2013186447A1] The present invention concerns a device for monitoring a loss of blood fluid of a patient and an associated monitoring method, said device comprising a central unit (2), at least one peripheral device (3) with means (4) for weighing and means (5) for storing said fluid, means (11) for transmitting a signal between the peripheral device (3) and the central unit (2) and, according to the invention, means (8) for inserting data relative to the patient and processing means (13) combining the data inserted relative to the patient and the data relative to the volume and flow rate of the losses of blood fluid, making it possible to determine at least one level of risk.
