Abstract (en)

[origin: WO2013185851A1] The present invention relates to a measurement device for measuring and adjusting at least one control element of a model helicopter, comprising an electronic measurement unit (2), and a fastening unit (7) which is or can be connected rigidly to the electronic measurement unit (2) and which is to be mounted on the control element to be measured. To achieve the object of making available a measurement device with which other control elements of a model helicopter can be measured and adjusted, it is proposed that the measurement device (20) is provided for measuring and adjusting the tilt of a swash plate of the model helicopter, wherein the fastening unit (7) can be placed flat at least in some areas on the top and/or bottom of the swash plate.
