Abstract (en)
[origin: EP2671694A1] The guide has a holder fixed on a hair or beard clipper, and a tiltable part articulated on the holder. The holder includes slides allowing the guide to move along a frame of the clipper during utilization, where the movement of the guide along the frame is motorized. The holder includes an adjustment unit i.e. thumb wheel, to adjust cutting length. The holder and the tiltable part are connected by hinges (9) to retract the tiltable part to use a cut line close to skin. Stops (12) and bolts (11) block the tiltable part in an accurate deployed or non-deployed position.
