Abstract (en)

[origin: WO2014012747A1] The invention relates to a method and device for standstill monitoring in rail vehicles using a train control device. According to the invention, a standstill position which is safe with respect to signalization and sensor information, which is safe with respect to signalization, of at least one clear track signaling system in particular, current counter readings of axle counter sensors, are recorded on the vehicle side, in order to monitor an entire operation immediately after restarting the rail vehicle.
