Abstract (en)  
[origin: WO2013183023A1] A capsule (1) containing a powdered food substance which can be extracted by passing water through it to make a beverage comprises a body (2) comprising a lower wall (3) and a lateral wall (4), and a lid (6) fixed to the body (2). The lid (6) and a central portion (8) of the lower wall (3) are pierceable respectively to allow the injection of water into and the extraction of a beverage from the capsule (1). Between the lid (6) and the lower wall (3), and in a position close to the latter, there is a filter (9), permeable to the beverage, which retains the powdered food substance, the filter being at least mainly made of a layered sheet of flexible material fixed to the body (2), and separating the powdered food substance at least from the central portion (8). The sheet of flexible material is shaped to form, substantially at the central portion (8), at least one projection (10) towards the lid (6). At the projection (10) the filter (9) is distanced from the central portion (8) and there is a compartment (12), located between the filter (9) and the central portion (8), where a piercing element can be inserted following penetration through the central portion (8), without damaging the filter (9).
