Abstract (en)  
[origin: WO2013182317A1] Herein described is a probe card for an apparatus for testing electronic devices, of the type comprising at least one probe head (21) which houses a plurality of contact probes (22), each contact probe (22) having at least one contact tip suitable to abut against contact pads of a device to be tested, as well as a supporting plate (23) of such probe head (21) associated with a stiffener (24, 24') via an interface plate (25). Suitably, the probe card (20) comprises a plurality of connecting elements (27) with clearance between the supporting plate (23) and the interface plate (25) housed in a floating manner in a plurality of respective seats (28) made in the supporting plate (23) and a plurality of further connecting elements (27') without clearance between the interface plate (25) and the stiffener (24).
