Abstract (en)

[origin: WO2014169900A1] The invention relates to a protective earth contact system which is suitable for electrical devices and systems having different supply voltages and is intended to be developed as a system that is cost-effective in production and assembly, for connecting the device connection line to the internal wiring of the device. For this, the device housing (5) has an entry port (38) for the device connection system, wherein a protective earth connection clip, which is a component of the device housing (5) and/or a fixing unit for the device connection system, is formed at the entry port (38) for the device connection system and can be in direct, mechanical, active connection to a correspondingly designed protective connection earth contact of the device connection system.
