Abstract (en)  
[origin: WO2013186459A2] The invention essentially concerns an insulating element (200) for a stator (300) of an electric machine, characterized in that it comprises: an annular support (201); and arms (202) distributed circumferentially about the support (201) and extending radially relative thereto from the internal periphery of the support (201) towards the interior of the insulating element; as well as rims (206) extending on either side of the arms (202), the insulating element (200) having an abutment face (207) which is to be placed flat against an end face of the stator (300).
