Abstract (en)

[origin: WO2013186460A2] The invention concerns an element (200) for holding winding wires for the stator (300) of an electric machine, the element comprising an annular support (201) with an internal periphery and an abutment face (207) which is to be placed flat against an end face of the stator. The wire-holding element also comprises systems (220) for anchoring stator winding wires disposed on the support (201) on the side opposite the abutment face (207).
