Abstract (en)  
[origin: WO2013182406A1] The present invention relates to an induction heating cooktop (1) having one or more than one induction coil (3) and a control unit (4), and relates to a wireless kitchen appliance (2), suitable for being operated wirelessly on the induction heating cooktop (1), having a user interface (6) having a display and keypad that provides monitoring and controlling of the operating parameters like temperature, motor speed, a microcontroller (7) in the memory of which the identification information and operating parameters are recorded, and the receiver coil (8) that supplies the microcontroller (7) and the user interface (6) with low value voltage by the power that is partially received from the induction coil (3).
