Abstract (en)

[origin: WO2013187907A1] A catheter insertion apparatus with visual indication of needle penetration of a blood vessel and placement of the catheter cannula within the blood vessel, using blood vessel pressure to indicate needle penetration by the presence of blood within a transparent chamber within the apparatus and the displacement of a plunger to create a negative pressure on the cannula and thus allowing blood to be visible within the catheter hub thereby indicating the introduction of the cannula into the blood vessel.
